Overview
Applications
Practices
Q&A Prep
Toxicity evaluates whether an LLM response contains toxic statements, including insults, threats, or other harmful language. DeepEval identifies opinions in the response and judges whether each is toxic. The score is higher when the response is less toxic.
ADVANTAGES
Provides a normalized score and a reasoned judgment of toxicity.
Surfaces individual opinions identified as toxic.
Can be applied to text responses without retrieval context.
LIMITATIONS
Toxicity judgments can depend on context and language nuance.
An automated score should not replace human review for consequential moderation decisions.
SCORE INTERPRETATION
0.75–1.00: Generally non-toxic; inspect

Practices
Q&A Prep
Conversation Completeness evaluates whether an assistant fulfills the intentions expressed by the user across a multi-turn conversation. DeepEval identifies user intentions, judges whether each was satisfied, and derives an overall score from those verdicts.
ADVANTAGES
Evaluates task completion across turns rather than judging only the final response.
Breaks the overall score down into user intentions with individual verdicts and reasons.
Works directly with conversational turns without requiring retrieval context.
LIMITATIONS
The score depends on the judge correctly identifying user intentions and interpreting context.
Ambiguous requests and implicit expectations may require human review.
A complete conversation is not necessarily factually correct or safe; use additional metrics where needed.

CONVERSATION COMPLETENESS
SCORE
0.0000
VERDICT
INCOMPLETE
EXPLANATION
The score is 0.0 because the LLM response only contained the fragment "for each month 2days of " and failed to explain how leave balances are added in the portal each month, leaving the user's request unanswered.
INTENTION RESULTS
User wants to know how leave balances are added in the leave portal each month
Not satisfied
The assistant replied with an incomplete fragment "for each month 2days of " which does not explain how leave balances are added in the portal each month.

Response
METRIC
CONVERSATION COMPLETENESS
SCORE
0.5000
VERDICT
PARTIAL
EXPLANATION
The score is 0.5 because the LLM response never provided the salary account balance, only asked for more information (e.g., "i need some more details to process" and later "account number is required"), thus only partially satisfying the user's request for required details.
INTENTION RESULTS
User wants to know the balance of their salary account
Not satisfied
The assistant never gave the account balance; it only responded with requests for more information, e.g., "i need some more details to process" and later "account number is required", so the user's request was not fulfilled.
User wants to know what details are required to process the request
Satisfied
